

EPHYDRIDAE.

Ephydra austrina Coq. One specimen collected by Mr. Davis.

Paratissa pollinosa (Will.). A number of specimens were collected by Mr. Davis, August 5.

DROSOPHILIDAE.

Drosophila punctulata Loew. A number of specimens were obtained by Mr. Davis at St. Georges, July 9.

Drosophila ampelophila Loew. The fruit-fly. Record by Prof. Verrill as very abundant on decaying fruit, associated with other related species.

AGROMYZIDAE.

Ophthalmomyia lacteipennis Loew. Two specimens were collected by Mr. Davis at St. Georges, July 21.

BORBORIDAE.

Limosina fontinalis Full. One specimen was obtained by Mr. Davis.

Limosina sp. One imperfect specimen, much smaller than the preceding. Dr. Dahl also records an undetermined species found on dead sea-weed.

DIESTRAMMENA UNICOLOR IN NORTH AMERICA.— I have lately received a female of this East Asian species which was captured in a greenhouse in Chicago, Ill., from Mr. W. J. Baumgartner. Its congener, *marmorata*, reported to have established itself in conservatories at Minneapolis, is likewise of Asiatic origin. Both species doubtless owe their introduction to commercial importations of foreign plants, among the wrappings of which they easily secrete themselves.— A. P. MORSE.
